

Holosonic Therapy Multidimensional Music

➤ MULTIDIMENSIONAL Music SATURATES LIVING CELLS with NEGENTROPIC, NUTRITIVE ENERGY.

During the course of her life, Jacotte CHOLLET, ex TV producer has met with many remarkable men, including KRISHNAMURTI, Karl PRIBRAM, David BOHM, Fritjof CAPRA, Paul MACLEAN, and other wise though lesser-known people —such as the Papuans of New Guinea, the aborigines of Australia, the medicine-men of North America and the Caribbean. These encounters inspired her to make the attempt to expand her cerebral faculties, considering the fact that we use only 10 % of the capacities of our brains, this represents a vast program.

Her quest led to a period of intense research that was to last over ten years, investigating the acoustical phenomena beyond the limits of human perception .

During this research, her path crossed that of Lydie RIES, a biologist and Pr. Régis DUTHEIL(1), doctor and professor, co-director of the Louis de BROGLIE Foundation, who was working specifically on phonons, the particles that Albert EINSTEIN had posited in his Theory of Relativity.

After all these years of patient work with synthesizers, sensations, and the psycho-kinetic interactions between the human brain and the musical instruments (including several period of laboratory verification) Jacotte CHOLLET was to create **MULTIDIMENSIONAL MUSIC in which sound, infrasound and ultrasound work together to send vibratory messages to living cells.**

These harmonious frequencies by linking their resonance in the form of coherent waves (**holo-phonons**), have the effect of literally nourishing cells with functional information.

Studied under laboratory conditions, this musical information seems to increase their capacities and coherence, whether they are cells or neurons.

➤ **Our DNA hears music and participates in consciousness process.**

Ever since music has been used as therapy, man has suspected that acoustic vibrations have a direct or indirect influence on the human organism, but no scientific proof has ever been advanced. Indeed, there was not even a satisfactory theoretical approach.

But with the work of Szent Gyorgyi and Herbert Frolich (both Nobel prize winners) and especially the recent work of Fritz Albert POPP on the biology of light and

electromagnetic inter-cellular bio-communication, we know today that the nucleated cells , by the way of physical and vibratory configuration of its DNA, is capable of picking up, storing and broadcasting information (that is to say: order and neguentropy) **from the environment** .

This suggests, amongst other things, that living matter organizes its environment, an idea which recalls the Gaia hypothesis of James LOVELOCK. In 1989, F. A POPP(2) demonstrated that cells communicates with one another, coherently, by exchange of photon quanta.

Lydie RIES has recently brought into light a proof of the coherent action of phonons (vibratory quanta in the sound range) .

"At the moment", remarks Pr DUTHEIL, "Multidimensional Music is the only method already opening on supraliminal medicine as it will establish itself in the XXIst century, because it affects both consciousness and the electromagnetic body- field, because it restores order and neguentropy."

➤ NEGUENTROPY

Neguentropy or neg-entropy is a negative entropy without which no living system would be viable.

In opposition to entropy which expresses an increase of disorder in the universe, neg-entropy is an impregnation of order and coherence into the structure of matter .

> In other terms, neguentropy is a force of information that organizes the structures and functions of living systems, and participates in inter-cellular bio-*communication* .

"Primordial unity of consciousness can be established or re-established by direct contact between the music and the person experiencing it, which releases emotional knots and what might be called "cysts" in the parasympathetic system. It may be observed that, in resonance with Multidimensional Music, these phenomena tend to disintegrate, and the effects is communicated from cell to cell throughout connected system.

The re-balancing of potentials along the meridians of acupuncture is also noted.

The effects are physical, psychic and holistic .The phenomenon, originating with cellular perception of vibrations, is translated in part by increasingly specific sensations which correspond to an increased holistic self awareness.

"The first effect of that music is that of an auto-diagnosis", Pr. DUTHEIL says, "immediatly followed by a therapeutic effect, first the revelation of traumas, and then their immediate corrections operated by our higher consciousness.

At this level of higher consciousness, time no longer exists, past is superimposed

on present as the hologram of our multidimensional body extends as well into the past as in the future. There are a great number of nodal point, or energetic vortices, if you prefer, which link the different vibratory levels corresponding to different phases of our multidimensional body. They are both photonic and tachyonic.

Doctors who practice "energetic" medicine have discovered some of these points by accident, but often act erratically, since they do not solicit interaction with the patient's consciousness.

In order to act on the whole being and re-establish neg-entropy in the body, consciousness must play its part.

Between a good acupuncturist and his patient, for example, it is the interaction of the two quantic fields of consciousness which enables the result to be optimized by tapping into the field of total consciousness.

These are not simply words.

If I use that particular model, It's precisely because we are dealing here with quantum mechanics.

On this point, It must be said that in current experiments with light , "something superluminal" is actually happening.

Experiments with guide waves made by physicist from COLOGNE , then reproduced by American researchers, have shown that within a guide wave (centimetric radio waves) there are bundles of waves which travel faster than light.

Physicists don't know yet what to make of it. As far I am concerned, it seems quite simple: a photon is composed of a bradyon and tachyon.

I sent an article to the Academy of Sciences on this subject last month.

(3) When Louis de Broglie, in 1923, proposed that particles presented wave-like properties (or associated wave) he had calculated that this wave, said to be "in phase", travelled faster than light ; at the time, this was considered an outrageous assumption.

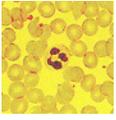

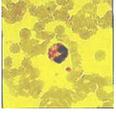

All the books on quantum mechanics that I have read mention this superluminal velocity which is revealed

by calculations, but consider it can not be physically measured and proved*.

We're presently working with scientists from the Villetaneuse laboratory who study atomic interference, and they've actually measured the speed of this phase, which is far superior to that of light.

So it seems there is now a number of indications enabling us to give a proper explanation to many of the remaining paradoxes and riddles of quantum physics.

PROOF OF VIBRATORY ACTION OF M.M.D music ON LIVING CELLS

	<p>➤ slide 1: blood cells in a fresh sample. This sample is here to show the actual configuration of a fresh cell.</p>
	<p>➤ slide 2: Sample taken before an experiential session with MMD and kept for 3 days in a fridge.</p> <p>--> One can notice that the white corps has totally lost its form thus its "information".</p>
	<p>➤ slide 3: Sample taken from the same subject just after an experiential session with MMD music of 1 hour and a half & kept for 3 days in a fridge.</p> <p>--> One can notice that the white corps has RETAINED its FORM and its INFORMATION despite 3 days of aging.</p>

➤ MMD music INCREASES THE QUANTITY OF HEMOGLOBIN AND REINFORCES THE IMMUNE SYSTEM.

Among the different proofs of these invisible phenomena which occur within our cells above and beyond the speed of light, those recently brought to light by biologist L.RIES(4) are particularly interesting .

L.RIES : "During strong variations in my own emotional and energy states, I had noticed significant alterations of some of my biological constants .

Jacotte CHOLLET's Multidimensional Music has enabled me to continue this research, thanks to the multiple effects of this music on different fields: physical, emotional, psychic and energetic, and to recover scientific evidence of the link between body and mind .

Study of the physiological effects produced by resonance with Multidimensional Music is beginning to reveal the circuits that relay information between consciousness and cells".

"In order to study the effects of this active music", specifies L.RIES, " we collected blood samples from voluntary subjects, both before and after audition of the music .

We noted important variations in the number of white corpuscle , the aging of nucleated cells, and hemoglobin.

The white corpuscle, notably the poly-nuclear neutrophiles (PN), increase almost constantly up to 4700/mm³.

The hemoglobin (HBO) in the sample also shows noticeable increase during auditions of this music, from 0,5 to 2 g/ liters after an audition of one to 2 hours".

"At the same time, we carried out tests on the gas content of blood samples, noting a

super oxygenation in the blood of people tested after an experiential session with M.M.D".

➤ **MMD SLOWS DOWN AGING PROCESS**

"As for the effects of M.M.D on cellular aging", continues L.RIES, "it was brought to light accidentally.

The blood sample (both pre and post audition) were forgotten in the refrigerator, and arrived at the laboratory three days later.

On the smears on the glass slides colored by May Grundwald Giemsa, we noted that the form of the nucleated blood cells from the post audition were in a better state of preservation than those sampled before the experiential session with MMD.

In the samples taken before listening to MMD, it was noted that only 20% of the PN were identifiable by their form, whereas in the post audition sample, 60% of these same cells were not only identifiable, but still intact.

As for lymphocytes, we noted 34% of cells intact from samples taken before listening to the music, compared with 76% of cells intact from samples taken after listening to MMD.

The slowing of the aging process, indicated by the conservation of the form of nucleated cells, seems to indicate that M.M.D has enabled contact with information at the cellular level, accompanied by an increase in neugentropy (order and coherence) which promotes access to a higher level of consciousness. And the fact that the red corpuscles (enucleated cells) were subject to the same aging before and after listening leads us to suppose reception of the information by the nucleus, therefore by **DNA**.

Since we know that "phonons" share the same electro-magnetic properties as photons, and are, in fact, their acoustic equivalent, we may conclude that DNA may, by sympathetic resonance and by a laser effect, play the role of an electro-magnetic aerial during the listening of this music.

"By a phenomenon of resonance, audio frequencies created in a state of inner coherence may enable reinstatement of electro-magnetic coherence in the listening subject, by eliminating malformations of the electro-magnetic body. The correct information may then be transmitted to the physical body by way of DNA and hemoglobin.

As information increases order at the cellular level, the aging process could become non-mandatory as long as we are in contact with the orderly information from our higher consciousness."

➤ **A HARMONIOUS COMBINATION OF SOUND, INFRA-SOUND AND ULTRA-SOUND.**

We hear sound, with ultra-sound we enter into living matter, cellular environment, and with infra-sound, we touch this same matter, directly, as if with a microscopic finger. By combining these three ranges of frequency, which is possible with synthesizers and digital recording devices, we can reach a multidimensional form of communication between consciousness and matter, between composed music and the consciousness-material totality of the receiver (who needs not necessarily only hear with his ears but also with his flesh, his cells, and all the tissues of his unconscious).

> M.M.D music stands today as a means of therapy and personal development which is accessible to all, and which enables its listeners to gradually get rid of the grip of the past on emotional, physiological and psychic levels, whatever the age, from the moment the listener's consciousness participates in the exchange of information taking place in the infinitely small spaces of his body, between the exterior environment and the inner subatomic or quantic phenomena.

➤ **M.M.D INDUCES EXPANSION OF THE FIELD OF CONSCIOUSNESS**

Used by an increasing number of researchers, artists, people who are looking for a better level of development and accomplishment in whatever field it may be, Multidimensional Music has become a tool for exploring other dimensions of consciousness with notable results on the increase of creativity, of memory, of concentration, of capacity for "insight", of intuition.

MMD also maximizes performance and favors unfolding of latent innate skills.

Experience shows that the more efficient we already are, the greater and the more rapid the growth of efficiency is.

➤ **THERAPEUTIC APPLICATIONS OF M.M.D.**

1. An aid to auto-diagnosis

M.M.D stimulates awareness of the energetic phenomena responsible for disorder, with a view to correcting them by volitive (unconsciously willed) restoration of information, a process which is involved in self-healing .This mode of diagnosis enables the subject to become aware of the energetic disorder, including the cause of this disorder (the circumstances which have led to the "rupture with the correct information", even if this occurred many years before).

2. Therapeutic mode

The therapeutic mode in which consciousness plays a part proceeds a re-calibration and re-balancing of the electro-magnetic field (the energy body), which leads to noticeable improvement, both physical and psychic .
